

بسم الله الرحمن الرحيم

تمرین سری پنجم درس شبکه عصبی و یادگیری عمیق (شبکه‌های بازگشتی)

According to the presented image captioning example, search for or collect a database suitable for a specific application of image captioning. Instead of using images, you can utilize other data types that are not time-series. The database may include weather descriptions, medical image descriptions, and similar datasets. Use a model trained on the COCO database as the initial model, and fine-tune it with your data.

*This assignment can be completed in groups of up to three people. The smaller the group, the greater the potential for higher scores.

موفق باشید.
